Brisbane, QLD | Australian Permanent Resident github.com/iamabin linkedin.com/in/wang-chi

SUMMARY

Master of Computer Science graduate with hands-on experience in machine learning, full-stack development, and AWS infrastructure automation. First author of a paper accepted at ProvSec 2026, with award-winning course projects in computer vision and web development. Proficient in Python, PyTorch, and Flask, with a GPA of 6.25/7.

SKILLS

Languages	Python, C++, JavaScript, SQL
ML / AI	PyTorch, Transformers, NumPy, Pandas, Scikit-learn, Weights & Biases
Web / Backend	Django, Flask, React, REST APIs
Databases	PostgreSQL, PostGIS, MySQL, SQLite
Cloud / DevOps	AWS Cloud, Terraform, Docker, Git

PROJECTS

Caliber: Cross-Architecture Extraction-Cost Control for Score-Returning APIs *2026*
Python · PyTorch · Weights & Biases

- Led the implementation and experimental design of Caliber, a defense against black-box model extraction using Gaussian logit perturbation and margin-based calibration to control API output utility.
- Built an evaluation pipeline covering 34 model–dataset combinations across CNNs, Vision Transformers, LLMs, and VLMs, achieving mean relative utility-target errors of 1.1% for vision models and 1.4% for LLMs. First-author paper accepted at **ProvSec 2026**, an international security conference.

Taxi-Traj — Full-Stack Spatial-Temporal Visualization Platform *2025*
React · Flask · PostgreSQL

- Built a web application for exploring historical taxi GPS trajectories to support urban traffic analysis and received the **Best Project award among 150+ students** (INFS7205, UQ).
- Implemented spatial queries and aggregation in PostGIS to enable interactive trajectory filtering, hotspot detection, and route analysis.

CoughOverflow — Cloud-Native Image Analysis Platform *2025*
Python · Flask · Terraform · AWS · Docker

- Provisioned an end-to-end AWS architecture for containerized API and worker services using Terraform, enabling one-click, fully automated deployments.
- Decoupled the Flask API from background workers via SQS for millisecond responses, and configured ECS Fargate CPU-target autoscaling to absorb traffic spikes cost-efficiently.

Online Ordering System — QR-Based Restaurant Ordering Platform *2025*
Python · Django · Bootstrap · SQLite

- Independently developed a full-stack restaurant ordering application with Django and Bootstrap, designing the database schema, backend logic, and customer and restaurant-owner interfaces.
- Implemented user authentication, menu management, table-specific QR codes, and order tracking, enabling customers to browse menus and place orders from their phones without installing an app.

EDUCATION

Master of Computer Science, University of Queensland *Feb 2024 – Jul 2025*
GPA: 6.25/7.0
Bachelor of Computer Science (Advanced), University of Adelaide *Feb 2020 – Nov 2022*
GPA: 5.8/7.0

AWARDS

Best Project Award — INFS7205 Advanced Techniques in High-Dimensional Data (150+ students), Univ. of Queensland *2025*
1st Place — Facial Expression Recognition Competition (30 teams), Computer Vision, Univ. of Adelaide *2022*
Global Citizens Scholarship *2020 – 2022*
